PROFESSIONAL SUMMARY

Software Developer focused on building secure and scalable backend systems, with exposure to cybersecurity simulation and system-level design. Experienced in translating real-world security workflows into interactive, decision-driven applications using strong system design, backend engineering, and data-driven evaluation principles.

WORK EXPERIENCE

Software Developer

Apr 2025 – Present

Zindagi Technologies

New Delhi, India

Building the Government of India's National Cyber Range Platform

- Architected scalable REST APIs using FastAPI with object-oriented design principles across distributed, multi-tiered systems handling national-scale cybersecurity workflows
- Reduced API latency **30–40%** via **PostgreSQL** redesign; built event-driven microservices with **Kafka/RabbitMQ**, cutting inter-service latency **35%**.
- Owned **CI/CD** (GitLab) and **Kubernetes** by Helm deployments and monitoring Clusters
- Conducted code reviews, enforced Agile/Scrum practices, and mentored junior developers/interns; collaborated with product and security teams to ensure regulatory compliance.

Software Developer Trainee

Feb 2025 – Mar 2025

National Informatics Centre – Govt. of India

New Delhi, India

- Modernized a legacy government database using **Django** & RESTful APIs, cutting query response times **60%**.
- Optimized data retrieval with **MongoDB** and **Redis** caching; automated backup and recovery.

Software Developer Intern

Jul 2024 – Aug 2024

DRDO – Ministry of Defence, Govt. of India

New Delhi, India

- Built a real-time **computer vision** surveillance system using **LLM**, **CNNs**, **OpenCV**, and **object detection** in **PyTorch**, covering data preprocessing, model inference, and performance optimization for surveillance systems.
- Trained and fine-tuned **deep learning** models for threat detection, optimizing **inference latency** for real-time video analytics while adhering to strict operational security and compliance protocols.

TECHNICAL SKILLS

Languages: Python, SQL, C

Object-Oriented & API Design: FastAPI, Django, Pydantic, RESTful APIs, Microservices Architecture

Distributed Systems & Messaging: Apache Kafka, RabbitMQ, Event-Driven Architecture

Relational Databases: PostgreSQL, MySQL, Oracle

NoSQL Databases & Caching: MongoDB, Redis, InfluxDB, Apache Cassandra

Cloud & Infrastructure: OpenStack, Microsoft Azure, Amazon AWS, MinIO, Docker, Kubernetes, Linux, Rancher/Headlamp

CI/CD & DevOps: GitLab CI/CD, Git, Prometheus, Grafana

Testing & Documentation: PyTest, Postman, Swagger/OpenAPI, Automated & Functional Testing

Methodologies: Agile, Scrum, Kanban, Code Review, PR Management

Tools: VS Code, PyCharm, Jupyter Notebook, K9s

KEY PROJECTS

Sarathi Portal | Django, MongoDB, Redis

- Built REST APIs for a govt. portal with MongoDB storage & Redis caching for high-performance data integration.

Atomic Clock Drift Simulation | Python, ANN, NumPy

- Applied ANNs to model and correct cesium-133 clock drift with synthetic noise, achieving **~99.99%** accuracy.

EDUCATION

Inderprastha Engineering College, AKTU

Ghaziabad, India

B.Tech – Computer Science Engineering

2021 – 2025

Hans Raj Smarak Sr. Sec. School

New Delhi, India

CBSE Class XII – Non Medical

2020 – 2021

ACHIEVEMENTS & RECOGNITION

- **NCX 2025 (National Cyber Exercise)** – Invited as developer representative of Zindagi Technologies at India's premier national-level cyber defense simulation.
- **Research Publication** – Published an academic paper on Blockchain Technology. [\[View Paper\]](#)
